**WORLD’S LARGEST ELEPHANT POPULATION**

352,271 ELEPHANTS IN AFRICA

130,451 ELEPHANTS IN BOTSWANA

37% AFRICAN ELEPHANT POPULATION

**DEPT WILDLIFE & NATIONAL PARKS BUDGET**

400% INCREASE IN PARKS BUDGET

US$3m → US$12m

2012 → 2016

—

**MAIN OBSERVATIONS**

- The budget for Botswana’s Department of Wildlife and National Parks (DWNP) has reportedly been increased in order to hire additional personnel, build capacity among law enforcement and procure anti-poaching equipment. In August 2016, Minister of Environment, Wildlife and Tourism Tshekedi Khama announced that the annual budget for the Department’s Anti-Poaching Unit had been increased to BWP130m, from BWP32m when he joined in 2012.

- In 2015, it was reported that Botswana’s Financial Intelligence Agency, responsible for collation, analysis and dissemination of information relating to suspicious financial activity, was fully operational and working in collaboration with DWNP and other agencies.

- The DWNP has established a Tourism Intelligence Unit dedicated to combating wildlife crime.

- A National Anti-Poaching Task Team exists to improve collaboration between enforcement agencies and devise a joint mechanism for combating wildlife crime.

- In June 2014, Botswana hosted a UNODC-led workshop entitled ‘Recovering the Proceeds from Wildlife and Timber Crimes – African and Asian Experiences’. Botswana also hosted a Regional Anti-Money Laundering Workshop, involving relevant agencies from 20 countries to discuss financial investigation techniques in the context of international wildlife trade. However, there is insufficient publicly available information to determine whether seizures of proceeds of crime have taken place since 2014.

- Botswana is a member of the Wildlife Enforcement Network of Southern Africa (WEN-SA), which is not yet operational.

- It was reported in June 2015 that Botswana would sign an MoU with Kenya regarding co-operation in combatting illegal wildlife trade.

- Applying the ICCWC Wildlife and Forest Crime analytic Toolkit is a positive step towards identifying the gaps and actions required to strengthen the criminal justice response to wildlife crime; it is now important to ensure that information is made publicly available on progress made in implementing the recommendations arising from the Toolkit process.

**KEY INDICATORS**

| INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime |
| Multi-agency enforcement mechanism established to investigate wildlife crime |
| Financial intelligence unit includes wildlife crime on their portfolios |
| Assets and proceeds of crime seized in relation to wildlife crime cases since 2014 |
| DNA analysis used in wildlife crime investigations since 2014 |

BOTSWANA | ENSURING EFFECTIVE LEGAL DETERRENTS

**KEY INDICATORS**

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years
- Sentencing guidelines for wildlife crime have been disseminated
- Known convictions for wildlife crime since 2014
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014
- Has anti-corruption unit
- Known convictions for corruption related to illegal wildlife trade cases since 2014
- **63/100** TI Corruption Perceptions Index 2015

**MAIN OBSERVATIONS**

- Botswana has no centralised database recording prosecutions and court cases relating to wildlife crime.
- Botswana’s primary wildlife legislation is the Wildlife Conservation and National Parks Act 1992 (WCNPA). Under this Act, the following penalties are stipulated: seven years imprisonment and a fine of BWP10,000 (US$950) for hunting or capture of a protected species and for importing, exporting, re-exporting or transporting through Botswana any wildlife item without a permit and five years imprisonment and a fine of BWP5,000 for selling or processing unlawfully obtained wildlife items. Stronger penalties are stipulated for cases relating to rhinos or elephants.
- According to a recent study, the DWNP does not have powers of prosecution; issues have been raised regarding cooperation between the DWNP and prosecutors and there are no official protocols in place (Jayanathan, S. 2016). The study also highlights the need for increased awareness-raising initiatives among prosecutors and the judiciary, particularly regarding penalty guidelines and use of ancillary legislation which could be utilised for stronger sentences.
- The Proceeds of Serious Crime Act 1990 does not include environmental crime as a predicate offence. There appears to be little concrete evidence regarding the implementation and effectiveness of Botswana’s court handling practices in wildlife crimes and use of ancillary legislation for such crimes (Jayanathan, S. 2016).

**BEST PRACTICE**

At CITES CoP17 (October 2016), Botswana announced its willingness to unreservedly and voluntarily relinquish CITES Appendix II status for its own elephant populations to support an uplisting of all African elephants to the much tougher Appendix I protection.

In a statement (Oct 16), Minster Tshekedi Khama stated:

‘In past decades, Botswana supported the idea of limited, legal ivory sales from countries that managed their elephant herds sustainably.

We now support a total and permanent ban on the ivory trade, everywhere.’

**BOTSWANA | ERADICATING DEMAND**

**KEY INDICATORS**

- Prohibits trade in elephant ivory
- Prohibits trade in parts/products of Asian big cats
- Stockpiled ivory has been inventoried
- Destroyed ivory stockpile since 2014
- Destroyed other wildlife stockpiles since 2014
- No known incidents of thefts of government-owned wildlife stocks
- Government-led initiatives to reduce demand for wildlife products implemented since 2014

**MAIN OBSERVATIONS**

- As home to the world’s largest elephant population, Botswana’s strong commitment to protect its elephants is commendable. It has centralised its stockpile of ivory obtained as a result of natural mortality and has managed activities such as problem animal control (PAC) and seizures. It also has in place a system for conducting an inventory of its ivory stockpile on a routine basis and to separate illegal ivory obtained from seizures and that obtained from other sources. As a member of the EPI, Botswana has committed to putting all its ivory stockpiles ‘beyond economic use’. In July 2015, the President of Botswana inaugurated a 2.5-tonne sculpture of an elephant at the international airport in Gaborone, constructed from the tusks of elephants that died of natural causes, with a view to raising awareness about the plight of African elephants.
- In 2012, 26 tusks were stolen from Government stores in Kasane and in 2015 three rhino horns were reported to have been stolen from a Government store in Maun.
- Botswana prohibits domestic and international trade in any wildlife without a permit, as well as the manufacture of, or trade in, wildlife items imported or obtained illegally. The WCNPA stipulates that ‘export, import, transport through and re-export’ of CITES-listed animals and products thereof must be in accordance with CITES permits.

**BEST PRACTICE**

Although Botswana was one of the countries that sold ivory through two CITES-sanctioned international sales in 1999 and 2008, since 2014 there has been a significant change in policy favouring a precautionary approach to prohibiting ivory trade. Botswana is a co-founder and signatory of the Elephant Protection Initiative (EPI), which includes a commitment to close domestic ivory markets and to a minimum 10-year moratorium on all international ivory trade.
**CHINA | INVESTING IN ENFORCEMENT**

**KEY INDICATORS**

- **INTERPOL National Central Bureau** has officer(s) dedicated to investigating wildlife crime.
- **Multi-agency enforcement mechanism** established to investigate wildlife crime.
- **Financial intelligence unit** includes wildlife crime on their portfolios.
- **Assets and proceeds of crime seized** in relation to wildlife crime cases since 2014.
- **DNA analysis used in wildlife crime investigations** since 2014.
- **Government monitoring of online wildlife trade**.
- **Part of bilateral or multilateral agreements** that specifically tackle transnational wildlife crime.
- **Participated in INTERPOL operations on wildlife crime** since 2014.
- **Participated in regional/international enforcement operations on wildlife crime** since 2014.
- **Applied or declared intention to apply** CCWC Wildlife and Forest Crime Analytic Toolkit.

**MAIN OBSERVATIONS**

- China's National Inter-Agency CITES Enforcement Coordination Group brings together various agencies to coordinate enforcement actions on wildlife crime; although this group holds regular meetings with various agencies, it is not a permanent fulltime operational unit.
- Advanced investigation techniques have been used in wildlife crime cases, including tracing of phone calls and text messages and employing controlled deliveries.
- While enforcement efforts have resulted in successful prosecution and conviction in several cases, such efforts do not appear to be taking place uniformly—for example, there is limited information available about the prosecution of organised criminals involved in the trans-Himalayan tiger trade and there also does not appear to be strong enforcement co-operation with India and Nepal to end such trade.
- An extensive illegal wildlife trade persists both on open online trading platforms and through social media—an IFAW study found 1,662 suspected ivory items offered openly for sale on 21 websites over a six-week period in 2014, despite all online ivory sales being illegal. While major online trading platforms such as Taobao and Alibaba have implemented effective policies to eliminate illegal wildlife trade through their websites, and there are multiple examples of successful prosecutions for online trade in wildlife, the scale of the issue demands further investment and training of dedicated enforcement personnel.
- The Government has provided funding for anti-poaching in Kenya and Botswana.
- There is no publicly available information on whether the INTERPOL National Central Bureau (NCB) has officers dedicated to investigating and coordinating cases related to wildlife crime. China has, however, participated in INTERPOL operations such as Operation PAWS II in 2015. China did not participate in the INTERPOL Project Predator strategic planning meeting in November 2015, a significant missed opportunity because it sought to develop a common enforcement strategy for combatting tiger crime.

**BEST PRACTICE**

China has signed a MoU with Kenya regarding ‘Cooperation in the Fields of Forestry and Ecological Conservation’. In 2014, through collaboration between Kenyan authorities and the Chinese Embassy in Kenya, Chinese police officers were dispatched to Kenya and arrested a Chinese national running an ivory carving factory in Nairobi. The suspect was extradited to China and jailed for 13 years.

**CASE FILES**

In October 2014, police in Yongjia County, Zhejiang, followed a tip-off to arrest a local pangolin trader and seize over 130 frozen pangolins and 60 bear paws. Subsequent investigations led police to arrest 41 suspects and seize evidence of more than 100 bank transfers. In total, during the investigation, more than 370 pangolins were seized and 65 suspects arrested, 32 of them sentenced in June 2016 receiving up to 13 years in prison.
Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years

Sentencing guidelines for wildlife crime have been disseminated

Known convictions for wildlife crime since 2014

Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014

Has anti-corruption unit

Known convictions for corruption related to illegal wildlife trade cases since 2014

37/100 11 Corruption Perceptions Index 2015

Above: Tiger bone wine sold at wildlife farm, China © EIA

Main Observations

■ Use of wildlife products such as tiger bone wine and tiger skins as bribes indicates that corruption is a significant challenge.

■ The Supreme Court has issued specific sentencing guidelines for cases involving smuggling, poaching, transport and trade of protected wildlife.

■ While mainland China prescribes custodial sentences of up to life imprisonment for wildlife trafficking, Hong Kong legislation allows for a maximum jail term of two years for such an offence, failing to meet the definition of ‘serious crime’ under UNTOC.

Challenge

A revised Wildlife Protection Law, China’s primary wildlife legislation, will come into place in January 2017.

The revised law continues to sanction trade in captive-sourced specimens of endangered species – a potential loophole enabling the laundering of wild specimens as captive and undermining demand-reduction efforts.

The revised law also devolves authority to provincial governments to approve commercial breeding of nationally protected species, a responsibility previously held by central authorities.

China | Ensuring Effective Legal Deterrents

Key Indicators

Prohibits trade in elephant ivory

Prohibits trade in parts/products of Asian big cats

Stockpiled ivory has been inventoried

Destroyed ivory stockpile since 2014

Destroyed other wildlife stockpiles since 2014

No known incidents of thefts of government-owned wildlife stocks

Government-led initiatives to reduce demand for wildlife products implemented since 2014

Main Observations

■ Medicines containing leopard bone are widely available in China. Although the purchase of leopard bone was banned in 2006, existing laws and policies permit medicine producers to continue using existing stocks, enabling laundering.

■ Existing laws and policies allow legal commercial trade in pangolin scales with a domestic yearly quota of approximately 26.6 tonnes of pangolin scales for use by designated hospitals. Licenses are also issued to 209 companies to produce products that contain pangolin. The origin of these scales is likely to be illegal, as they far outweigh the productive capacity of China’s wild or captive pangolin populations and legal imports.

■ While Hong Kong has destroyed its entire 29-tonne ivory stockpile, China has destroyed only 6.8 tonnes of seized ivory. A few small-scale destructions of other seized products notwithstanding, large stockpiles of seized and captive-origin tigers and other wildlife items have not been destroyed.

■ Government officials have participated in NGO-led workshops on reducing demand for illegal wildlife products, although targeted Government-led demand-reduction campaigns have been lacking.

■ The Government has launched a public awareness campaign under which Chinese nationals arriving in selected African countries receive text messages urging them to not buy illegal wildlife products.

■ While mainland China prescribes custodial sentences of up to life imprisonment for wildlife trafficking, Hong Kong legislation allows for a maximum jail term of two years for such an offence, failing to meet the definition of ‘serious crime’ under UNTOC.

Challenge

A revised Wildlife Protection Law, China’s primary wildlife legislation, will come into place in January 2017.

The revised law continues to sanction trade in captive-sourced specimens of endangered species – a potential loophole enabling the laundering of wild specimens as captive and undermining demand-reduction efforts.

The revised law also devolves authority to provincial governments to approve commercial breeding of nationally protected species, a responsibility previously held by central authorities.

China | Eradicating Demand

Key Indicators

Prohibits trade in elephant ivory

Prohibits trade in parts/products of Asian big cats

Stockpiled ivory has been inventoried

Destroyed ivory stockpile since 2014

Destroyed other wildlife stockpiles since 2014

No known incidents of thefts of government-owned wildlife stocks

Government-led initiatives to reduce demand for wildlife products implemented since 2014

Main Observations

■ A legal trade in ivory persists in China. Major abuse of the system and laundering of illegally sourced ivory has been widely documented. As the world’s largest destination for ivory, it is crucial that China immediately closes its domestic ivory market. In September 2015, China’s President committed to ending the domestic commercial trade in ivory but while the Government has adopted some measures to prohibit international trade in ivory, it is yet to fulfil its commitment to end its domestic trade. In June 2016, Hong Kong released a plan to phase out its domestic ivory trade by 2021, although this announcement has been criticised on the grounds that a five-year delay is unreasonable.

■ Stocks of illegally sourced ivory have been widely available in China. Although the purchase of leopard bone was banned in 2006, existing laws and policies permit medicine producers to continue using existing stocks, enabling laundering.

■ While Hong Kong has destroyed its entire 29-tonne ivory stockpile, China has destroyed only 6.8 tonnes of seized ivory. A few small-scale destructions of other seized products notwithstanding, large stockpiles of seized and captive-origin tigers and other wildlife items have not been destroyed.

■ Government officials have participated in NGO-led workshops on reducing demand for illegal wildlife products, although targeted Government-led demand-reduction campaigns have been lacking.

■ The Government has launched a public awareness campaign under which Chinese nationals arriving in selected African countries receive text messages urging them to not buy illegal wildlife products.

■ In 2015, New Era Health Group became the first state-owned Chinese company to include a zero-tolerance policy towards the use and gifting of illegal and endangered wildlife products within the company’s formal code of conduct.

Challenge

Despite several CITES directives to phase out tiger farming and prohibit tiger trade, China’s captive tiger population has grown to 5,000–6,000, with Government support and funding, while the country permits legal trade in skins of captive tigers, sold as luxury home decor. Further, despite a 1993 ban on use of tiger bone, companies are producing and openly selling tonic wines marketed as containing tiger bones. Moreover, the title of a 2005 Government-issued notification (not available in full) suggests that use of captive-bred tiger bone for medicinal purposes may be legal.

Insufficient action has been adopted to address the role of Chinese businesses and nationals taking advantage of weak laws and governance abroad to buy and sell wildlife products. For example, Chinese nationals are the main buyers in open wildlife markets in the border areas of Laos, Vietnam and Myanmar. Further, Chinese nationals in Africa play a key role in rhino horn and ivory trafficking; EIA investigations in 2014 in Tanzania documented Chinese-led organised crime syndicates conspiring with corrupt Government officials to smuggle several tonnes of ivory from Africa to China.
India | Investing in Enforcement

Key Indicators

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime.
- Multi-agency enforcement mechanism established to investigate wildlife crime.
- Financial intelligence unit includes wildlife crime on their portfolios.
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014.
- DNA analysis used in wildlife crime investigations since 2014.
- Government monitoring of online wildlife trade.
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime.
- Participated in INTERPOL operations on wildlife crime since 2014.
- Participated in regional/international enforcement operations on wildlife crime since 2014.
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit.

Main Observations

- Improving enforcement capacity including increase of 19 border posts along Uttarakhand border with Nepal in additional to existing 81 border posts and establishment of specialised red sandalwood anti-smuggling units in Andhra Pradesh. However, significant gaps in capacity continue to remain, including lack of capacity for proper evidence collection leading to low rates of conviction and poor remuneration and equipment provided to anti-poaching patrol staff.

- Deploying detection technology including drones and cameras as part of an e-vigilance system to combat illegal logging and red sandalwood smuggling in the state of Andhra Pradesh and use of canine units in seven states.

- Maintaining a unique tiger stripe pattern database of over 2,000 wild tigers and initiating the process for establishing RhoDIS—a database of DNA samples collected from wild Indian rhinos.

- In 2015, the INTERPOL Red Notice system was used to arrest a suspect in Mauritius in relation to red sandalwood smuggling. Recently, on request of the Madhya Pradesh Forest Department, INTERPOL issued a Red Corner Notice for a suspect implicated in tiger crime.

- In March 2015, the WCCB issued an advisory providing guidance on the use of the Prevention of Money Laundering Act (2002) for wildlife offences. This legislation has been applied in wildlife trafficking cases.

Best Practice

Indian legislation establishes a formal framework for multi-agency co-operation to combat wildlife crime. India’s lead multi-agency unit, the Wildlife Crime Control Bureau (WCCB), collects and disseminates intelligence on organised wildlife crime and co-ordinates and participates in operations between national and relevant foreign authorities. The WCCB has requested every state in India to set up a high-level inter-agency coordination committee called Wildlife Crime Control Unit (WCCU) to improve information exchange between relevant state and central authorities – 14 states have set up WCCUs. In addition, many states have created a number of specialist taskforces to combat wildlife and forest crime, either within their police or forest departments.

However, the WCCB is severely understaffed. Further, despite efforts to improve multi-agency co-operation between the central and state levels there continues to be a challenge in creating a uniformed response to wildlife crime due to differing levels of awareness and commitment amongst the states.

Case Files

In a case reported as the fastest ever conviction for tiger poaching, three people were sentenced to five years imprisonment each in 2014 for a tiger poaching incident in 2013. Forensic investigations were conducted which confirmed that DNA from the tiger carcass recovered matched the samples of the nails of the accused.

In 2015, organised elephant poaching in Kerala was traced to a Delhi-based middleman and nearly 0.5 tonne of ivory seized in an inter-state, multi-agency operation with 73 arrests made to date for a range of offences.

In 2014 multi-agency co-operation resulted in the seizure of 23 tonnes of red sandalwood and several arrests.
INDIA | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a 'serious crime' as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years
- Sentencing guidelines for wildlife crime have been disseminated
- Known convictions for wildlife crime since 2014
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014
- Has anti-corruption unit
- Known convictions for corruption related to illegal wildlife trade cases since 2014
- 38/100 TI Corruption Perceptions Index 2015

MAIN OBSERVATIONS

- In Pune the anti-corruption bureau (ACB) registered an offence against a police inspector and his family for alleged aiding and abetting in red sandalwood trafficking through corrupt practices.
- WCCB has observed that display of wildlife trophies on social media could stimulate poaching and illegal wildlife trade and has therefore requested relevant authorities to prohibit such acts by amending the WPA and by incorporating this as a condition in hunting permits.

CHALLENGE

Significant delays in prosecution undermines successful conviction—there are recurrent examples of suspects who are absconding after release on bail and the loss of evidence.

A study of trial court judgments in the State of Maharashtra, conducted by WPSI, recorded a success rate of 11.56% for prosecution of wildlife cases pointing to serious gaps in investigation and prosecution efforts. WPSI has recorded more than 900 tiger-related court cases in India, although few of these have resulted in convictions, with most pending.

As of June 2016, WPSI indicates that, to its knowledge, only 61 people have been convicted in India for tiger poaching or trade.

BEST PRACTICE

A briefing published by the Wildlife Protection Society of India (WPSI) highlights good enforcement co-operation between India and Nepal.

For example, in January 2016, Indian enforcement authorities seized two tiger skins and 35kg of tiger bones in an Indian tiger reserve bordering Nepal. The investigations that followed enabled the Nepal police to seize another tiger skin sourced from the same Indian tiger reserve.

INDIA | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory
- Prohibits trade in parts/products of Asian big cats
- Stockpiled ivory has been inventoried
- Destroyed ivory stockpile since 2014
- Destroyed other wildlife stockpiles since 2014
- No known incidents of thefts of government-owned wildlife stocks
- Government-led initiatives to reduce demand for wildlife products implemented since 2014

MAIN OBSERVATIONS

- The WPA is based on a strong conservation ethic and adopts a precautionary approach to protect wildlife. For example, the WPA strictly prohibits trade in species listed in Schedule I of the Act which includes tigers and other Asian big cats, elephants and rhinos. Consequently conservationists have expressed serious concerns about attempts by the Government to amend relevant laws and policies that would undermine wildlife conservation in India.
- In November 2014, 42,000 seized wildlife items were destroyed. The Manipur Forest Department also destroyed 115kg of seized pangolin scales.
- Efforts to inventory ivory stockpile have been initiated at the central level.

BEST PRACTICE

India does not have any stockpiles of Asian big cat specimens except those required for prosecution and training purposes. Possession of Asian big cat specimens (including live captive animals), without an ownership certificate is an offence. The period for receiving ownership certificates has passed and therefore no new specimens can be declared or legalised in India. Legalised specimens with certificates can only be transferred through inheritance and cannot be commercially traded. According to legal analysis conducted by the Wildlife Protection Society of India:

‘… with the limited exception of regulated trade between recognised zoos, Indian law creates a complete ban on all trade in all parts and products of all (Asian big cat specimens) from all sources.’

According to Government guidelines, tiger and leopard carcasses and body parts of animals found dead or seized by the Government are to be routinely destroyed with suitable safeguards when not required for prosecution. Further, every zoo is required to bury or burn carcasses of its animals and carcasses of large cats are required to be burnt in the presence of the director of the zoo to prevent big cat products entering trade.

In May 2016, WCCB met representatives of major e-commerce companies and it was agreed that the companies will alert WCCB about attempts to post offers of wildlife on their websites. Amazon India removed 296 items from its website in the ‘animal specimen’ category and 104 items under the ‘snares or traps’ category that were listed by third-party sellers.

ABOVE: INDIA ROUTINELY DESTROYS ALL STOCKS OF ASIAN BIG CAT PARTS AND PRODUCTS © EIA
KENYA | INVESTING IN ENFORCEMENT

**KEY INDICATORS**

- **INTERPOL National Central Bureau** has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 2014
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

**MAIN OBSERVATIONS**

- **Strengthening anti-poaching capacity** through establishment of an inter-agency anti-poaching unit, hiring of more than 500 new Kenya Wildlife Service (KWS) rangers, allocation of Ksh300m (c.US$2,959,000) for training of additional wardens, setting up a new encrypted radio system for use in national parks and planning for the launch of anti-poaching drones in all national parks.
- **Providing training** for customs officers in permit systems and identification of wildlife items; and for wildlife enforcement in detection of ivory, crime scene management and preparation of documents for prosecutors.
- **Building forensics capacity** to assist in prosecutions by establishing a new US$100m wildlife forensics laboratory in Nairobi, the first of its kind in East Africa, providing a regional hub for analysing DNA samples from seized wildlife specimens.
- **Use of canine units** to detect ivory and other wildlife products at Nairobi’s Jomo Kenyatta International Airport (JKIA) and Mombasa Port. The JKIA unit arrests on average two people per week for ivory offences.
- **As part of the UNODC-WCO Container Control Programme**, establishing a multi-agency Joint Port Control Unit in Mombasa Port to facilitate sharing of information in real time to profile, target and examine containers being used to smuggle wildlife products.
- **Improving international collaboration** to tackle wildlife crime; for example, a high level delegation visited China which resulted in the adoption of a bilateral agreement to improve collaboration in combating ivory and rhino horn trafficking.

**CASE FILES**

- **Kenya Revenue Authority**’s dedicated wildlife investigation unit traced the criminal network involved in a shipment of ivory from Mombasa to Bangkok, through analysis of records from the M-Pesa mobile phone bank transfer platform.

KWS in collaboration with the Embassy of China in Kenya and Chinese police officers dispatched from China were able to arrest a Chinese national running an ivory carving factory in Nairobi. The suspect was extradited to China where he was given a 12-year prison sentence.

Ivory smuggling kingpin Feisal Ali Mohammed was sentenced to 20 years imprisonment and Ksh20 million fine in July 2016. The case was a result of follow-up investigation of a seizure of two tonnes of ivory at Fuji Motors car yard in Mombasa in June 2014 and involved co-ordination amongst various government agencies and international partners, including INTERPOL and the Lusaka Agreement Task Force.

- **5 YEARS & ONE CONVICTION**
KENYA | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- 25/100 TI Corruption Perceptions Index 2015.

MAIN OBSERVATIONS

- Kenya’s new Wildlife Conservation and Management Act (WCMA) provides for severe penalties for wildlife crime (life imprisonment, and/or fines of up to Ksh20m/US$198,000), resulting in an increase in deterrent sentencing for wildlife crime. However, this has also led to an increase in ‘not guilty’ pleas due to high minimum penalties under the WCMA. In order to address this concern, the WCMA is being amended and a pilot to address delay in the courts was launched in December 2015. A plea bargaining policy developed within the Office of the Director Public Prosecutions (ODPP) requires national roll-out, although with high minimum penalties its effectiveness is questionable.
- A report by NGO Wildlife Direct on progress made in wildlife trials in 2014–15, since the enactment of the WCMA, is ‘cautiously optimistic’ about progress made. The report in particular notes improved management of case records and the denial of bail in a significant number of wildlife crime cases. However, the proportion of convicted persons given jail sentences without the option of a fine remained very low at 6% in 2015.
- A 2014 amendment to the Evidence Act has enabled admission of electronic and digital evidence, including photographs of wildlife items or carcasses. However, sensitisation of police and KWS investigating officers on such forms of evidence is required.
- In June 2016, the world’s first airport court became operational at Nairobi’s Jomo Kenyatta International Airport, in order to efficiently and quickly handle drugs and wildlife trafficking cases. In its first month, of the 10 cases related to ivory trafficking heard by the court, nine resulted in convictions.

KENYA | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory.
- Prohibits trade in parts/products of Asian big cats.
- Stockpiled ivory has been inventoried.
- Destroyed ivory stockpile since 2014.
- Destroyed other wildlife stockpiles since 2014.
- No known incidents of thefts of government-owned wildlife stocks.
- Government-led initiatives to reduce demand for wildlife products implemented since 2014.

MAIN OBSERVATIONS

- Kenya prohibits all trade in products from protected species and is a strong advocate for ending all trade in ivory. Kenya was one of 10 elephant range states to submit a successful proposal to CITES CoP17 calling for the closure of all domestic ivory markets. Kenya also signed the ‘Cotonou Declaration’ in November 2015, which supports closure of all domestic ivory markets.
- The Kenyan Government has been working with the private sector in tackling wildlife trade, including training of Kenya Airways staff in detection of wildlife products, the secondment of a CID officer at mobile phone company Safaricom to assist in tracing of mobile money transfers and working with the tea industry to prevent using tea products as a concealment method to smuggle ivory.
- Kenya is a signatory to the Elephant Protection Initiative (EPI), which includes a commitment to engage with the private sector and private citizens, close domestic ivory markets and commit to a minimum of a 10-year moratorium on all international ivory trade.
- Kenya destroyed 105 tonnes of ivory and 1.3 tonnes of rhino horn from its Government stockpile in a public burn on 30 April 2016. This followed a 21-day amnesty during which Kenyans could hand in illegal wildlife items in their possession.
- In April 2015, a delegation of six KWS officials travelled to China to discuss programmes aimed at reducing demand for ivory. Kenya has also worked with several African elephant range states to submit various proposals to CITES to increase protection for elephants and reduce demand for ivory.

BEST PRACTICE

A dedicated Wildlife Crime Prosecution Unit (WCPU) prosecutes wildlife cases across the country, with a specialised WCPU prosecutor in all courts. The WCPU, with the British High Commission and Space for Giants, developed a ‘Points to Prove’ guide for building a strong evidential case against those accused of wildlife and related crimes which includes procedures for inter-agency co-operation. Further prosecutorial capacity is being developed within KWS.

CHALLENGE

Corruption remains a major impediment to effective sentencing in Kenya. For example, the trial of ivory trafficker Feisal Mohamed was beset by allegations of corruption – an inquiry was launched into alleged tampering of evidence involved in the case and the magistrate was suspended.

There appears to be a significant degree of monitoring from civil society groups such as Wildlife Direct and Space for Giants, whose monitors note ‘an overall improvement in trial procedures’ but ‘continue to report numerous cases where suspects of serious crimes get off scot-free’. However, efforts are being made to address corruption in Kenya. For example, UNODC and KWS are working on high priority areas, selected based on risk analysis, in developing risk mitigation strategies and actions to address vulnerabilities to corruption in KWS.

BEST PRACTICE

KWS conducted a full inventory and centralisation of government ivory and rhino horn stockpiles in 2015; 25,052 pieces of ivory (137,679 tonnes) and 1,248 pieces of rhino horn (1,519 tonnes) were counted. Despite initially stating that all pieces would be sampled, DNA samples were only taken from 2,300 ivory items and 800 rhino horns. However, this included samples from all ivory seizures of more than 500kg, as recommended by CITES.
### LAOS | INVESTING IN ENFORCEMENT

**KEY INDICATORS**

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 2014
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

### MAIN OBSERVATIONS

- While Laos established a national multi-agency enforcement mechanism (Laos-WEN) in 2011 and two provincial multi-agency enforcement units to tackle wildlife crime, Laos-WEN does not appear to have been fully deployed for dismantling criminal networks operating in and through Laos.
- Engagement in Laos-WEN by key agencies such as the Environmental Police, Customs and prosecutors is unclear. In addition, since 2009 an inter-agency agreement has been in place to coordinate the implementation of CITES among the army, police (which includes the INTERPOL NCB), Customs, forestry officers, prosecutors and the import/export department of the Ministry of Industry and Commerce.
  - Laos is increasingly playing an important role in the region as a wildlife trafficking hub primarily targeting Chinese nationals as buyers and it is crucial to secure effective cooperation with bordering countries. In 2016, frontline enforcement officers from the Department of Forest Resources Management participated in a field mission to discuss wildlife trafficking with links to Laos. In addition, ivory and other wildlife products are openly available for sale in Sanjiang Market, Vientiane, as well as in Luang Prabang. Market, Vientiane, as well as in Luang Prabang.
  - Laos is increasingly playing an important role in the region as a wildlife trafficking hub primarily targeting Chinese nationals as buyers and it is crucial to secure effective cooperation with bordering countries.

### CHALLENGE

- There are at least seven specialist law enforcement agencies mandated with combating wildlife crime but there is an apparent lack of clarity of roles and responsibilities for implementing this mandate. In particular, there is a need for improved collaboration between the Department of Forest Inspection (DoFi) and Department of Forest Resources Management. Further, there is also need for clarity about the division of competence at the national and provincial levels.

### CASE FILES

- At least 11 tonnes of ivory have been seized globally with links to Laos. In addition, ivory and other wildlife products are openly available for sale in Sanjiang Market, Vientiane, as well as in Luang Prabang. As of October 2016, only one ivory seizure has been recorded in Laos— in 2015 at Wattay airport, 48kg of ivory was seized from two suitcases originating from Ethiopia. The seizure was the result of collaboration and information exchange with regional partners, although it is important the seizure is now followed up with investigations leading to arrests and prosecutions.
  - One case of rhino horn trafficking was recorded in 2015 after the Royal Thai Police provided information to the Thai Department of National Parks and Wildlife from an alleged rhino horn trafficker from Thailand. However, Laos police did not follow up with any investigation as information had allegedly been received through ‘unofficial’ channels.

---

1. **Key Indicators**: Significant progress, Some progress, Lack of significant progress, No data available
2. **Excluding**: CITES, UNTOC, UNCAC
3. **Excludes INTERPOL operations**
There is a serious concern about wildlife farming in Laos where several farms have been implicated in wildlife trafficking. In a bold and commendable move, Laos recently declared its intention, with the help of experts, to phase out all tiger farms. It is important that the Government now implements this commitment by adopting measures to stop the expansion of tiger farms in Laos and to review applicable laws and policies that currently encourage commercial breeding of tigers and other wildlife. It is estimated that 700 tigers are held in farms in Laos.

**MAIN OBSERVATIONS**
- Laos has been subject to several CITES compliance processes for failure to implement the Convention. There appear to be plans to revise the law in 2017, although details on potential revisions are unclear.
- Anti-money laundering legislation was enacted in 2015 and the UK Government is providing support for implementation of the new law which includes environmental crime, including trafficking of ‘protected’ wildlife species, as a predicate offence.
- According to the UNODC, over the period 2011–14, DoFI investigated 18 wildlife related cases. Although the current Wildlife and Aquatic Law of 2007 provides for imprisonment of up to five years for the import, export or re-export of protected wildlife, in 2016, law enforcement authorities informed a CITES mission that no arrests or prosecutions related to illegal trade in rhino horn, elephant ivory and other wildlife specimens have occurred in the country since 2012. Indeed, it is possible that there has never been a single conviction for wildlife crime in Laos.

**CHALLENGE**

A recent CITES mission to Laos and assessments conducted by organisations such as UNODC have highlighted various loopholes in the main legislation used to investigate wildlife crime, namely the Wildlife and Aquatic Law of 2007.

For example, the 2007 Law encourages the capture and use of wild founder stock for breeding and authorises trade in parts and products of captive-bred animals (including tigers, elephants and rhinos).

Possession does not appear to be treated as an offence. While the Act does provide protection for some species, in the absence of a comprehensive definition of protected species the scope of the Law remains unclear. It appears that trade in several non-native species such as helmeted hornbill may be allowed under the 2007 Law.

There is a serious concern about wildlife farming in Laos where several farms have been implicated in wildlife trafficking. In a bold and commendable move, Laos recently declared its intention, with the help of experts, to phase out all tiger farms. It is important that the Government now implements this commitment by adopting measures to stop the expansion of tiger farms in Laos and to review applicable laws and policies that currently encourage commercial breeding of tigers and other wildlife. It is estimated that 700 tigers are held in farms in Laos.

**MAIN OBSERVATIONS**
- There is a serious concern about wildlife farming in Laos where several farms have been implicated in wildlife trafficking. In a bold and commendable move, Laos recently declared its intention, with the help of experts, to phase out all tiger farms. It is important that the Government now implements this commitment by adopting measures to stop the expansion of tiger farms in Laos and to review applicable laws and policies that currently encourage commercial breeding of tigers and other wildlife. It is estimated that 700 tigers are held in farms in Laos.
- A well-known wildlife market in Vang Vieng was closed in September 2016 by the Ministry of Agriculture and Forestry in collaboration with NGO Free the Bears; more than 50 bear gall bladders were seized along with numerous bones, teeth and fur from a variety of species. A total of 43 traders were identified and some were charged, although there is no information available on whether investigations are ongoing to secure convictions.
- Although it was reported that certain illegal wildlife products in the Golden Triangle Special Economic Zone (GTSEZ) in northern Laos were confiscated and burnt in March 2015, there has been no reported inventory of items confiscated. Some tiger skins were reportedly destroyed but photographs of them were not shared and cross-referenced against India’s photographic identification databases for the purpose of investigating origin.
- Stockpiles of seized Siamese rosewood (Dalbergia cochinchinensis) are not centralised.

**CHALLENGE**

EIA investigations in the GTSEZ have documented a thriving elephant ivory market and trade in tiger parts and products both from wild tigers trafficked from Myanmar and from captive tigers kept at the GTSEZ, primarily aimed at Chinese buyers. A Chinese company called Kings Romans Group manages the GTSEZ and the Government of Laos has, in essence, given a free pass to the company to operate in the GTSEZ, where a wide range of illegal wildlife products are openly traded. This undermines current initiatives at combatting the illegal wildlife trade in Laos.
MALAWI | INVESTING IN ENFORCEMENT

KEY INDICATORS

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 2014
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

MAIN OBSERVATIONS

- The Government has reduced the budget for the Department of National Parks and Wildlife (DNPW) for the year 2016–17, a key agency responsible for wildlife management and enforcement. Much of the progress achieved in Malawi to combat wildlife crime since 2014 has been funded by external partners; for example, dogs from the Malawi Police Service Dog Detection Unit are being trained in detection of wildlife items, funded by the German development agency GIZ.

- Lack of a national centralised database of criminal information has resulted in most criminal records being available on paper only, which impedes information-sharing between agencies. A national database on wildlife crime is in development as of July 2016.

The Inter-Agency Committee Combatting Wildlife Crime (IACCWC) is a multi-agency unit established in June 2014 and includes agencies such as police, judiciary, prosecutors, Anti-Corruption Bureau, Financial Intelligence Unit and NGOs to better enable sharing of information. However, the IACCWC is not a full-time agency and lacks adequate resources, which has meant that it has not yet had a significant impact on arrests and convictions.

- DNPW does not currently have access to Malawi’s Financial Intelligence Unit (FIU) which can only be deployed by those agencies that have an MoU with the FIU, namely the police and Anti-Corruption Bureau. Further, the FIU does not have an investigative mandate and so hands over information gathered to other agencies, which lack capacity and training in this area to enable successful convictions for financial crimes relating to wildlife crime. In addition, proficiency with the Money Laundering Act among prosecutors is limited.

- The WCIU is working with counterparts regionally, and particularly with the Zambian Wildlife Authority, but cooperation with other agencies in the region has been very limited: no MoUs have been signed with agencies in Tanzania or Mozambique, and Malawi has not yet ratified the Lusaka Agreement Task Force.

- Malawi has not submitted any requests for mutual legal assistance under international agreements such as UNTOC and UNCAC.

BEST PRACTICE

In April 2016, a Wildlife Crimes Investigation Unit (WCIU) was established under the DNPW, funded by the UK Government and containing officers seconded from Malawi Customs and police, together with DNPW officers. The WCIU had made more than 35 arrests by August 2016, mostly relating to ivory trafficking.
MALAWI | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- 31/100 TI Corruption Perceptions Index 2015.

MAIN OBSERVATIONS

- The current National Parks and Wildlife Act (NPWA), Malawi’s principal wildlife legislation, provides weak sentences for wildlife crime which do not meet the UNTOC ‘serious crime’ standard. However, proposed amendments to the NPWA include harsher sentences for wildlife crimes, up to 30 years imprisonment, and protection of non-native CITES-listed species. A February 2014 review stated that the average fine for ivory trafficking was MWK20,000, equivalent to US$20. To address the issue of weak sentencing, a prosecution guidelines handbook is in development.
- A review of illegal wildlife trade in Malawi, commissioned by the DNPW, was published in May 2015. In response to its recommendations, a task force was created in November 2015 to lead a review of the NPWA and, as of August 2016, the task force had completed an amendment bill, which has been passed to the Ministry of Justice and is expected to be submitted to Parliament in December 2016, a very rapid progression and a true sign of political commitment.
- In August 2016, the Lilongwe Wildlife Trust began a prosecution and court programme in partnership with the prosecution services, which includes joint litigation with public prosecutors and independent court monitoring, along with development of charge sheet templates and templates for submissions and impact statements. This will enable court-by-court analysis of sentencing for wildlife crime and corruption offences.
- A recent increase in custodial sentences has been noted due to increased awareness among the judiciary, improved investigations and the aforementioned court programme. Six cases were concluded in September 2016, all of which were given custodial sentences. Approximately 20 custodial sentences handed out between June and September 2016 ranged from 1.5 to 14 years, with an average sentence of 3.5 years.
- Wildlife crime is not currently part of the standard national training curriculum for police, customs, prosecutors or the judiciary.

MALAWI | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory.
- Prohibits trade in parts/products of Asian big cats.
- Stockpiled ivory has been inventoried.
- Destroyed ivory stockpile since 2014.
- Destroyed other wildlife stockpiles since 2014.
- No known incidents of thefts of government-owned wildlife stocks.
- Government-led initiatives to reduce demand for wildlife products implemented since 2014.

MAIN OBSERVATIONS

- DNPW in collaboration with NGOs has run the ‘Stop Wildlife Crime’ campaign since March 2014 to increase awareness of wildlife crime. The Campaign has involved a film released in April 2016, featuring President Mutharika and 14 international envoys which calls on viewers to reject ivory and report suspicious activity, and displaying posters at Lilongwe Airport advertising the number of a confidential wildlife crime hotline.
- 2.6 tonnes of seized ivory was destroyed in March 2016 and other small-scale ivory destructions have also taken place. However, there is no timeline in place for the destruction of its remaining 4.2-tonne ivory stockpile, and no seized items derived from other species have been destroyed.
- Domestic trade in elephant ivory is prohibited since a moratorium was implemented in September 2013. There is, however, a significant legal domestic trade in hippo ivory, which presents enforcement challenges due to its similarity to elephant ivory, particularly in worked form.
- As a signatory to the Elephant Protection Initiative, committed to close domestic ivory markets and observe a minimum ten year moratorium on all international ivory trade.

CHALLENGE

Perception of corruption in Malawi indicates that corruption in public institutions is common. A study included in the aforementioned 2015 illegal wildlife trade review found that corruption and geographical placement, along with other factors, make Malawi an ‘ideal place’ for wildlife criminals and that there have reportedly been instances of corruption ‘indicating direct collusion between some government officials and the core organised criminal groups and/or community members.’

Malawi’s Anti-Corruption Bureau (ACB) is said to have become more active in gathering wildlife crime information but it has restricted capacity. Potential avenues to address corruption include addressing agencies’ internal compliance with the National Anti-Corruption Strategy and improving transparency and collaboration among relevant agencies: an MoU between DNPW and the ACB has been drafted but not yet finalised.

ABOVE: SIGNIFICANT LEGAL HIPPO IVORY TRADE IN MALAWI IS AN ENFORCEMENT CHALLENGE DUE TO SIMILARITIES IN WORKED HIPPO AND ELEPHANT IVORY PRODUCTS

ENVIROMENTAL INVESTIGATION AGENCY (EIA) 62/63 Upper Street, London N1 0NY | E.ukinfo@eia-international.org | www.eia-international.org
MOZAMBIQUE | INVESTING IN ENFORCEMENT

KEY INDICATORS

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 2014
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

MAIN OBSERVATIONS

- Support from external stakeholders has included anti-poaching equipment worth ZAR2.6m (approx US$200,000) from the South African Government; UNDP funding to develop a National Law Enforcement and Anti-Poaching Strategy; a US$40m grant from the World Bank to support the Government-led ‘MOZBIO’ project, including training for enforcement officers; and ZAR30m (approx US$2m) from Dutch and Swedish lottery grants for anti-poaching equipment and training.
- Applying the ICCWC Wildlife and Forest Crime Analytic Toolkit is a positive step and it is now important to ensure that information on progress made in implementing the recommendations arising from the Toolkit process is made publicly available.
- Mozambique’s Environmental Police Unit has more than 1,500 officers. A major impediment to its effective functioning is that it does not currently have a mandate for investigations, although efforts to enable development of investigative capacity are underway. Government investment in the unit increased in 2014 but it remains under-resourced.
- Capacity to detect wildlife trafficking at exit points has been increased – scanners are in place at Maputo Airport and Maputo, Beira and Nacala ports, and training of canine units at border points is in progress.
- An inter-ministerial task force set up in February 2014 reportedly meets regularly to coordinate enforcement activities on wildlife crime.
- Bilateral cooperation with South Africa has been improving, including mutual visits by prosecutors and judiciary. An MoU was signed in 2014 to support development of joint anti-poaching operations in the cross-border Great Limpopo Transfrontier Park. Eight joint operations conducted between January 2015 and June 2016 led to 15 arrests in the trans-frontier area.
- Mozambique has signed three MoUs. One with Tanzania in May 2015, addressing information exchange and collaboration between wildlife agencies in the cross-border Selous–Niassa ecosystem and another with China in October 2016, on improving collaboration to combat organised crime, although it is not clear whether this MoU also covers wildlife crime. An MoU with Vietnam on cooperation to combat illegal wildlife trade is in development as of June 2016.
- Mozambique has failed to report ivory seizures to the CITES Elephant Trade Information System (ETIS).

CHALLENGE

Mozambique has been identified as a country of priority concern in ivory and rhino horn trafficking. The Niassa reserve in northern Mozambique, which adjoins the Selous Reserve in Tanzania, has been hit by rampant elephant poaching. DNA analysis of ivory seized outside Mozambique reveals that at least 11 large ivory seizures during the period 2006–13 originated from northern Mozambique.

In southern Mozambique, along the Kruger-Limpopo Transfrontier Park bordering South Africa, rhino horn trafficking is a serious concern. According to a 2014 report published by C4ADS, 80–90% of rhinos poached in Kruger National Park during the period 2008–13 were attributed to cross-border Mozambican poachers.

Mozambique is also a major transit hub for rhino horn being trafficked to Asia. A substantial increase in seizures of rhino horn since 2015 has been documented, including a major seizure of 65 rhino horns in Matola in May 2015.
MOZAMBIQUE | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014
- Has anti-corruption unit
- Known convictions for corruption related to illegal wildlife trade cases since 2014
- 31/100 11 Corruption Perceptions Index 2015

MAIN OBSERVATIONS

- A prosecutor dedicated to environmental crime has been appointed within the Attorney General’s Office. At least two training sessions have been provided for prosecutors in CITES and wildlife crime.
- Awareness-raising meetings have been held with members of the Judiciary regarding the new Conservation Law. Nonetheless, a legal review conducted in 2015 by law firm DLA Piper identified lack of capacity and relevant training in the judiciary as a major obstacle to effective prosecution and deterrent sentencing for wildlife crime.
- The CITES Secretariat has reported that Mozambique has enacted CITES-specific legislation.

CHALLENGE

The new Conservation Law was ratified in April 2014, providing for maximum prison sentences of up to 12 years for poaching of protected species. However, these stronger sentences do not appear to apply for wildlife trafficking cases and the Law fails to define the protected species covered under its remit. The maximum sentence for transport or sale of protected species is a fine equivalent to US$4,151–82,712.

Corruption is a major impediment in Mozambique. According to a 2014 report by C4ADS, Mozambican poaching syndicates have close links with local enforcement, with evidence linking firearms and equipment used in poaching to police, army and border forces. The NGO Freedom House describes corruption as ‘pervasive’ in Government and the private sector. A 2016 study by the Centre for Public Integrity identified Customs and maritime security as among the most corrupt sectors and the judiciary is widely perceived to be corrupt. EIA investigations in 2012 into illegal logging in Mozambique exposed how corrupt Government officials enabled Chinese traders based in Mozambique to traffic of timber to China.

Existing anti-corruption legislation fails to adequately cover activities such as embezzlement and diversion of funds, and corruption cases tend to be dealt with as disciplinary rather than criminal cases.

CASE FILES

Although 539 alleged poachers were arrested during the period 2012–14, this resulted in only 17 fines and no custodial sentences. Three poachers were jailed for 10 years in July 2015 for elephant poaching.

The IUCN Rhino Specialist Groups and TRAFFIC reported to CITES CoP17 that in January 2014, seven high-ranking police officers and officials in Massingir, which abuts Kruger and Limpopo national parks, were arrested for armed robbery and trafficking in rhino horn, but all were subsequently released on bail. Further, a Vietnamese national initially arrested at Maputo Airport going to Kenya with seven rhino horns in May 2012 was then detected one week later at Bangkok’s international airport in transit from Kenya to Hanoi with the horns.

MOZAMBIQUE | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory
- Prohibits trade in parts/products of Asian big cats
- Stockpiled ivory has been inventoried
- Destroyed ivory stockpile since 2014
- Destroyed other wildlife stockpiles since 2014
- No known incidents of thefts of government-owned wildlife stocks
- Government-led initiatives to reduce demand for wildlife products implemented since 2014

MAIN OBSERVATIONS

- A domestic ivory market persists in Mozambique and ivory carvings are sold in markets in Maputo. In the absence of a clear definition of the species protected under the new wildlife law, it is unclear whether all domestic and international trade in ivory and other CITES specimens is prohibited. A 2006 report published by TRAFFIC (before the enactment of the new law) notes that in 2005 the Government had called upon vendors and those in possession of wildlife products, including elephant ivory, to register and license their products and businesses.
- The Government has reported to the CITES Secretariat that it has conducted an inventory of Government-held ivory and rhino horn which was completed in April 2016, with DNA samples taken.
- Mozambique destroyed 2.4 tonnes of ivory and 193kg of rhino horn from the Government stockpile in July 2015; however, there is insufficient publicly available information to determine whether the entire ivory and rhino horn stockpile has been destroyed.
- In May 2015, 12 rhino horns were stolen from a police strongroom in Matola. The horns were part of a seizure of 65 horns and 1.1 tonnes of ivory made two weeks earlier. Subsequent arrests included four senior police officers. This followed a 2012 theft of 1,094kg of ivory from the central Maputo stockpile. A security audit of warehouses used to store ivory and rhino horn was subsequently completed in May 2016 and efforts are now underway to centralise the stockpile and improve security.
- The Government has collaborated with other stakeholders in holding a workshop to inform Chinese nationals based in Mozambique of national wildlife laws.
NEPAL | INVESTING IN ENFORCEMENT

KEY INDICATORS

- Nepal’s INTERPOL National Central Bureau (NCB) is established within the Nepal Police. The international cooperation afforded under INTERPOL helped Nepal track and extradite a notorious Nepalese rhino poacher and trafficker from Malaysia.
- The Central Investigation Bureau (CIB) is a specialised investigation entity established within the Nepal Police which includes a unit dealing with wildlife crime.
- To facilitate national inter-agency co-operation, the Wildlife Crime Control Bureau (WCCB) has been established, headed by the Director General of the Department of National Parks and Wildlife Conservation and represented by enforcement agencies such as the Nepal Police, Nepal Customs and the National Intelligence Department. As of February 2015, the WCCB has 16 units in 18 districts, although not all district-level units are represented by key enforcement agencies.
- With funding from USAID, Nepal’s Centre for Molecular Dynamics has genetically profiled known wild tigers in Nepal. Of the 15 tiger skins seized in 2016, six were proven to have originated in Nepal. However, use of forensics in investigations is limited due to lack of capacity among frontline law enforcement personnel.
- According to a 2015 study, the number of different wildlife species seized specifically within the Kathmandu valley has increased from four species (2003) to over 30 different species (2013), with the number of arrests increasing for the same period due to improved inter-agency cooperation (B.R. Dangol, 2015).
- The Statute of the SAWEN was ratified by Nepal in July 2016. The recent endorsement of the SAWEN Statute by five of the eight member countries is a significant development as it legitimised the network.

CHALLENGE

A number of different agencies are mandated to tackle illegal wildlife trade but lack the necessary equipment, personnel, training and overall capacity to tackle wildlife crime. There are concerns about inadequate interagency collaboration on wildlife crime. For example, Customs officers lack basic equipment and capacity to detect illegal wildlife trade and are trained in the Revenue Administration Centre where wildlife crime is not part of the curriculum. Due to these factors, it would appear that Nepal Customs plays a limited role in ongoing efforts to combat wildlife trafficking, a significant missed opportunity to stop wildlife trafficking through major entry and exit points in the country.

CASE FILES

Between 1 January 2015 to 6 June 2016 more than 60 individuals were arrested for trade in tiger, leopard, rhino parts and products, ivory, pangolin scales, live pangolins and red sandalwood.

Four individuals were sentenced to 14—15 years imprisonment and fined for rhino poaching in Sep 2014.
NEPAL | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.

27/100 11 Corruption Perceptions Index 2015

MAIN OBSERVATIONS

- Priority species offered the greatest protection in Nepal include tiger, elephant, clouded leopard, gaur and rhino. Penalties for illegal trade in these species include imprisonment between 5-15 years and/or a fine equivalent to US$500–1,000.
- A majority of penalties imposed in wildlife crime case appear to be limited to fines without imprisonment. For example, the conviction rate in wildlife crime cases in the Kathmandu Valley is relatively high (46.6%), although the penalties imposed in a majority of such cases were fines (B.R. Dangol, 2015).

NEPAL | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory.
- Prohibits trade in parts/products of Asian big cats.
- Stockpiled ivory has been inventoried.
- Destroyed ivory stockpile since 2014.
- Destroyed other wildlife stockpiles since 2014.
- No known incidents of thefts of government-owned wildlife stocks.
- Government-led initiatives to reduce demand for wildlife products implemented since 2014.

MAIN OBSERVATIONS

- Sample collection and bar-coding of seized wildlife parts in Chitwan district has taken place.
- Nepal is a country of limited demand for wildlife parts and products, acting mainly as a source or transit country for a number of species. Wildlife specimens seized in Nepal (sourced either from Nepal or neighbouring countries such as India) are typically destined for use in China or South-East Asia and China.

CHALLENGE

Seized wildlife products are not securely stored in a centralised location, with reports indicating that Asian big cat parts and red sandalwood are stored in various locations across the country. While decentralised stocks may be maintained for local enforcement purposes, dispersed stockpiles raise concerns about potential leakage into illegal trade.

For example, it has been alleged that seized pangolin scales were reported missing in 2011 from Sindhupalchowk. The Government has expressed interest in developing a process to centralise all stockpiles of seized wildlife and to subsequently destroy them; it has formed a team to conduct an inventory of seized wildlife and has recommended destroying these items.
At ZAR 5.9bn (approx US$438.5m), the budget for the Department of Environmental Affairs (DEA) represents less than 1% of total Government expenditure in the financial year 2015–16. Provincial and federal wildlife enforcement agencies are under-funded, with provinces such as Limpopo and Mpumalanga particularly lacking in resources.

**Main Observations**
- The multi-agency National Wildlife Crime Reaction Unit (NWCRU) was established within the DEA in 2010 to facilitate information-sharing and coordinate enforcement responses between provinces. However, it has been reported that the functioning of this unit has been hindered due to lack of resources and co-operation from provincial authorities and police.
- The multi-agency National Wildlife Crime Reaction Unit (NWCRU) was established within the DEA in 2010 to facilitate information-sharing and coordinate enforcement responses between provinces. However, it has been reported that the functioning of this unit has been hindered due to lack of resources and co-operation from provincial authorities and police.

**Investment** since 2014 has included training of at least 1,047 border officials in wildlife trade issues and the deployment of canine units. In addition, wildlife enforcement in South Africa receives considerable support from NGOs, particularly through the provision of anti-poaching equipment.

**Arrests relating to rhino poaching** have increased, with 317 made nationwide in 2015 compared to 258 in 2014.

**South Africa** has signed MoUs with China, Vietnam, Cambodia, Mozambique and Laos focusing on cooperation around wildlife management and enforcement and capacity-building. Similar agreements are proposed with Thailand, Kenya, Botswana and Tanzania.

**The South African Police Service’s Directorate of Priority Crime Investigations** (informally known as the ‘Hawks’) has an Endangered Species Section dedicated to gathering intelligence relating to poaching or trade in protected species.

In 2015, the Police Service and the National Prosecuting Authority received Certificates of Commendation from the CITES Secretary-General in recognition of joint enforcement operations targeting rhino horn trafficking.

**Case Files**

The National Prosecuting Authority has specialised prosecutors dedicated to prosecuting rhino crimes. In 2010, Dawie Groenewald and other members of his syndicate, which included professional hunters and vets, were arrested for illegal hunting, rhino horn racketeering, money-laundering and fraud. Groenewald is alleged to have illegally sold at least 384 rhino horns over a four-year period. In 2012, the Asset Forfeiture Unit seized assets worth ZAR55m (about US$6.8m at the time) in this case, but the forfeiture was subsequently overturned by a court. The case remains pending in 2016.
In November 2015, in a lawsuit filed by two game breeders, a High Court ruling invalidated South Africa’s domestic moratorium on trade in rhino horn. A series of appeals by the DEA means that the ban is temporarily valid and reinstated, pending a DEA appeal filed in the Constitutional Court challenging the High Court decision.

**Main Observations**

- An increase in the number of convictions and stronger sentences has been noted in recent years, including through the use of ancillary legislation.

**Key Indicators**

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.

**Challenge**

The National Environmental Management: Biodiversity Act 2004 (NEMBA) provides the broad framework for wildlife protection in South Africa, but each of the nine provinces in the country has the autonomy to implement the national law with their own legislation. According to a 2016 study, substantial differences exist between provincial wildlife laws thereby creating numerous loopholes which undermine effective law enforcement (Jayananth S., 2016). Significant discrepancies also exist in prosecutorial capacity of different provinces.

**Training and awareness-raising programmes** aimed at prosecutors and judiciary have included training conducted by the DEA for almost 400 magistrates and prosecutors in 2015. Training and assistance has been provided by the NGO Endangered Wildlife Trust to prosecutors and investigating officers. A 2015 training course in environmental legislation for prosecutors was provided by the DEA and Justice College. In addition, a conference focused on the prosecution of rhino-related crimes for regional and district magistrates was run by the DEA and Judicial Education Institute together with UNEP in May 2015.

- Following on from cases in which organised criminal syndicates hired Vietnamese and Czech nationals with no hunting experience to legally hunt rhino to procure rhino horn—known as ‘pseudo-hunting’—South Africa stopped issuing hunting permits to nationals of these countries.
- Corruption is an obstacle in effective enforcement relating to wildlife crime. For instance, 11 policemen were arrested in relation to rhino horn trade in 2015. While various anti-corruption bodies exist, according to a report published by the Global Initiative in 2016, there is no effective anti-corruption strategy within the police and the DEA is also lacking a specific anti-corruption programme. The report also states that corruption is a serious problem in Kruger National Park, where two rangers were arrested in relation to rhino poaching in June 2016, and in certain provincial conservation offices.

**Challenge**

According to a July 2015 report by TRAFFIC and WildCru, a minimum of 280 captive tigers are held in 44 facilities in South Africa. At least one of these facilities is owned by a Vietnamese national with more than 50 tigers in the north-west province.

Between 2006–15, 212 live tigers, 25 tiger ‘trophies’ and 20 tiger skins were exported from South Africa with CITES permits. The same report states that ‘fragmented’ South African legislation offers ‘very little protection’ to non-native species such as tigers and that domestic trade ‘is not regulated or monitored’.

The report has documented a growing trade in tigers and their parts and products from South Africa and has highlighted a concern that tiger bones from South Africa may be laundered as lion bones using CITES Appendix II permits. Moreover, in April 2015 two Chinese nationals were detained on arrival in Kunming, China, from Johannesburg with tiger bones and a tiger skin in their luggage.
**TANZANIA | INVESTING IN ENFORCEMENT**

**KEY INDICATORS**

- **INTERPOL National Central Bureau** has officer(s) dedicated to investigating wildlife crime.
- Multi-agency enforcement mechanism established to investigate wildlife crime.
- Financial intelligence unit includes wildlife crime on their portfolios.
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014.
- DNA analysis used in wildlife crime investigations since 2014.
- Government monitoring of online wildlife trade.
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime.
- Participated in INTERPOL operations on wildlife crime since 2014.
- Participated in regional/international enforcement operations on wildlife crime since 2014.
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit.

**MAIN OBSERVATIONS**

- The Tanzanian Wildlife Authority (TAWA) was conceptualised in 2014 for wildlife conservation in areas outside national parks and was reported to have become fully operational in July 2016.
- Government investment since 2014 has included the hiring and training additional wildlife rangers. In addition, several capacity-building initiatives have been implemented with the support of NGOs and foreign governments.
- Canine units have been deployed at key border crossings since January 2016 and, as of June 2016, have led to 26 wildlife seizures, including ivory and pangolin scales.
- Tanzania has not conducted DNA analysis on any of the four large-scale ivory seizures (≥500kg) made since 2010, as per CITES recommendations. However, DNA analysis conducted on 28 large-scale ivory seizures outside Tanzania (between 1996–2014) indicates Tanzania was one of the main sources.
- There appear to be duplication of efforts between the two multi-agency units responsible for combating wildlife trafficking, namely the National and Transnational Serious Crimes Investigation Unit (NTSCIU), and the Multi-Agency Task Team (MATT) established in 2015. The NTSCIU has made 803 arrests in relation to ivory in 2015, of which 233 led to convictions.
- An Inter-Ministerial Task Force exists to coordinate wildlife-related enforcement and includes agencies such as the Tanzania Revenue Authority and Intelligence and Security Services.
- Efforts to improve international collaboration have included the adoption of an MoU with China, but despite this agreement there does not appear to be strong enforcement cooperation between the two countries. A bilateral agreement was adopted with Mozambique to coordinate management and anti-poaching activities across the Selous-Niassa ecosystem. Tanzania also hosted a regional summit on wildlife crime in November 2014, which resulted in the adoption of the ‘Arusha Declaration’, signed by eight African states, committing to improving regional collaboration. While Tanzania has participated in INTERPOL operations since 2014, there is insufficient evidence available as to whether other proactive regional and international enforcement operations have taken place outside the INTERPOL framework.
- Applying the ICCWC Wildlife and Forest Crime Analytic Toolkit is a positive step and it is now important to ensure that information on progress made in implementing the recommendations arising from the Toolkit process is made publicly available.

**CASE FILES**

Tanzania issued INTERPOL Red Notices for two Chinese nationals for ivory trafficking following which, in 2016, two other Chinese nationals were sentenced to 35 years imprisonment for ivory trafficking and attempted bribery.

High-profile arrests in 2015 including the so-called ‘Queen of Ivory’ Yang Fenglan, a Chinese national based in Dar es Salaam, and ‘Shetani’, named in media reports as a key organiser of large-scale elephant poaching.

In 2016, a number of convictions of both Tanzanian and Chinese nationals related to ivory have resulted in fines of between US$4,400–274,000 or 20-year prison sentences; other punitive measures exceed this. This is encouraging progress and it is hoped that several older ivory trafficking cases which remain pending in the courts will be concluded in the near future.

**MAIN OBSERVATIONS**

- In conjunction with NGOs, a programme was launched in May 2016 by the Tanzania Judiciary Training Department and the Tanzania Wildlife Division to improve awareness of wildlife crime among the judiciary. A study conducted by TRAFFIC revealed that the vast majority of the judiciary have received no training on wildlife crime. Furthermore, chronic delays in the court system mean that even the best investigations and prosecutions stand a significant chance of derailing due to the persistent culture of adjournments; a case of ivory smuggling through Zanzibar is in its third year and has yet to start hearing evidence.

- Amendments to Tanzania’s Wildlife Conservation Act 2009 are awaiting submission to parliament. The process has been delayed since 2013. According to a recent study, there appears to be confusion among prosecutors and judges themselves regarding the applicable legislative framework (Jayanathan, S. 2016). The situation is likely exacerbated by the lack of clarity on the status of existing laws and the undue delay in adopting amendments. Access to laws has been cited as a problem within the judiciary and the prosecution, with no central database of enacted laws available.

- While charges have been brought for corruption in at least one case related to ivory trafficking, it is unclear whether relevant ancillary legislation such as anti-money laundering laws are being applied in wildlife trafficking cases.

**TANZANIA | ERADICATING DEMAND**

**KEY INDICATORS**

| Prohibits trade in elephant ivory |
| Prohibits trade in parts/products of Asian big cats |
| Stockpiled ivory has been inventoried |
| Destroyed ivory stockpile since 2014 |
| Destroyed other wildlife stockpiles since 2014 |
| No known incidents of thefts of government-owned wildlife stocks |
| Government-led initiatives to reduce demand for wildlife products implemented since 2014 |

**MAIN OBSERVATIONS**

- Tanzania is a co-founder and signatory to the Elephant Protection Initiative (EPI), which includes commitments to put ivory stockpiles beyond economic use, close domestic ivory markets and commit to a minimum of a 10-year moratorium on all international ivory trade. Yet despite these commitments under the EPI, Tanzania actively supports proposals from other countries to enable international legal trade under the CITES framework.

- Tanzania has reportedly conducted an inventory of its ivory stockpile with assistance from the NGO Stop Ivory; however the inventory results have not been made publicly available and it is unclear whether the inventory included all Government-held ivory.

- NGOs African Wildlife Foundation and WildAid, in conjunction with the Ministry of Natural Resources, launched the ‘Poaching Steals from Us All’ campaign in 2015, aimed at increasing awareness of illegal wildlife trade.

**CHALLENGE**

- Although Tanzania’s Wildlife Conservation Act 2009 provides for a minimum of five years imprisonment or a fine for illegal wildlife trade, the equivalent legislation in the autonomous region of Zanzibar stipulates a maximum penalty of six months imprisonment or a fine of US$185 equivalent.

- Zanzibar law only applies to native species, therefore excluding the majority of CITES-listed species, including elephants and rhinos. Efforts are reportedly underway to address this major legislative loophole. There is a need to improve enforcement co-operation between mainland Tanzania and Zanzibar.

- Chronic corruption in Tanzania is a vital enabling factor for the trafficking of large consignments of ivory, particularly in Customs at key ports. EIA’s 2014 report Vanishing Point revealed that Chinese-led criminal gangs were conspiring with corrupt Tanzanian officials to traffic huge amounts of ivory, leading to an elephant poaching crisis in Tanzania.

- Many high-level officials within the ruling CCM party have also been named in the Tanzanian media and Parliament in connection with ivory trading. It does not appear that the key corrupt officials implicated in ivory trafficking which led to Tanzania’s elephant poaching crisis have been held accountable or prosecuted.

*LEFT: TUSKS FROM YOUNG POACHED ELEPHANTS OF SELOUS BEING OFFERED FOR SALE © EIA 2010*
THAILAND | INVESTING IN ENFORCEMENT

KEY INDICATORS1

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime2
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 20144
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

MAIN OBSERVATIONS

- There is no fulltime operational multi-agency enforcement unit, but the Thai-Wildlife Enforcement Network comprises 22 agencies, including prosecutors and judiciary.
- 38 wildlife checkpoints have been established to implement CITES and the Wild Animal Preservation and Protection Act (WAPPA).
- MoUs on illegal wildlife trade have been adopted with Laos, Malaysia and Cambodia.
- Established 22 new ivory trade patrol teams and 11 joint task force teams at key border areas, airports and seaports to aid detection and prevention of illegal wildlife and ivory trade.
- Scientific specialists, police, Customs and wildlife enforcement officers have participated in training courses since 2012 as part of the ARREST programme, a USAID initiative, in collaboration with ASEAN-WEN. This included a project with TRACE (Tools and Resources for Applied Conservation and Enforcement) on using DNA analysis to assess origins of seized elephant ivory.
- In 2015, DNA forensic scientists from Thailand and other South-East Asian countries met to standardize testing methods in wildlife forensics and established a regional DNA database of protected species in Southeast Asia.
- In October 2015, following a proposal submitted by the Royal Thai Police (RTP), ASEAN Security Ministers signed a declaration reinforcing commitment to combat cross-border crime, including wildlife and forest crime.
- Fingerprint dusting is regularly used on wildlife seizures with recovered fingerprints uploaded to the Customs and national digital fingerprint database which can be shared with INTERPOL.
- Thai Customs has deployed 27 large scale x-ray units, including 12 mobile units.
- The Department of Special Investigations (DSI), under the Ministry of Justice, has included wildlife and forest crime as part of its mandate. This department has wide-ranging investigative powers which includes access to bank accounts and phone records.
- Despite having legislation enabling use of controlled deliveries, this specialised investigation technique has not been deployed in wildlife trafficking cases.
- Ministry of Natural Resources and Environment signed an MoU with the Anti-corruption Committee and DSI in Jan 2016.

CASE FILES

Anti-money laundering legislation has been used in six cases concerning rosewood with authorities conducting raids at 20 locations across five provinces in the north-east of Thailand. These investigations into a Thai-Laotian rosewood syndicate revealed that the financial investment for the smuggling operation came from Laos and was brought into Thailand in US dollars, changed into Thai baht, deposited in a temporary account in a Thai bank and used to purchase rosewood. This syndicate also had links with a tour company and vehicle garages.

The Anti-Money Laundering Office (AMLO) was awarded the Asia Environmental Enforcement Award (a joint initiative by UNEP and FREELAND) in 2015 for recovery of the proceeds of crime from a wildlife trafficking syndicate. In mid-2014, it was reported that in a civil case brought by the AMLO, assets worth over US$36 million belonging to a wildlife trafficking syndicate were frozen; Daoreung Chaimas, alleged to be one of South-East Asia’s biggest tiger traders, was a member of this syndicate. The efforts of the AMLO in this case were heralded as a breakthrough at the time of the seizure; however, in 2016 it was reported that the asset recovery court order was revoked.
THAILAND | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014.
- Charges brought under ancillary legislation e.g., anti-money laundering laws in wildlife crime cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- 38/100 TI Corruption Perceptions Index 2015.

MAIN OBSERVATIONS

- New legislation has been proposed which will require captive tiger facilities to microchip all captive tigers and obtain tiger stripe pattern documentation and DNA samples.
- Awareness-raising workshops led by Thai judges have been conducted for judiciary and prosecutors on the severity of environmental crime.
- A positive amendment to the Customs law eliminated a major loophole which required a representative of the destination country to be present upon inspection of suspicious cargo in transit. According to Thai Customs, this change in the law resulted in an increase in the detection of wildlife trafficking. The amendment also increased penalties to up to 10 years imprisonment and a fine equivalent to four times the value of the seized goods under the Customs law; the Wild Animal Preservation and Protection Act, Thailand’s primary wildlife trade legislation, prescribes penalties of up to four years for the same offence.

CHALLENGE

Under WAPPA, African elephants are the only non-native species that are protected. This loophole has compelled enforcement agencies to apply, where possible, other non-wildlife legislation to protect many non-native CITES-listed species. For example, Thai wildlife law does not cover rhinos as a non-native species, so the Customs law has been used to seize illegal rhino horn. Thus a vast number of non-native species, including CITES-listed species, continue to be excluded from WAPPA, exacerbating trade in them.

THAILAND | ERADICATING DEMAND

KEY INDICATORS

- Prohibits trade in elephant ivory.
- Prohibits trade in parts/products of Asian big cats.
- Stockpiled ivory has been inventoried.
- Destroyed ivory stockpile since 2014.
- Destroyed other wildlife stockpiles since 2014.
- No known incidents of thefts of government-owned wildlife stocks.
- Government-led initiatives to reduce demand for wildlife products implemented since 2014.

MAIN OBSERVATIONS

- Since 2010, Thailand has seized over 18 tonnes of ivory. Only 2.7 tonnes of seized ivory was destroyed in 2015 and it is not clear whether a proper inventory and DNA analysis was done prior to the destruction.
- The Government has launched campaigns to raise awareness about illegal trade in ivory and other wildlife at international airports, key tourist attractions and trade hotspots such as Chatuchak Market, in Bangkok. Campaign materials were originally distributed in English and Thai and in 2016 were translated into Mandarin to target Chinese tourists.
- There are currently 1,450 tigers in captivity in Thailand, many in facilities that are self-declared ‘zoos’ but which have nothing to do with conservation. In June 2016, Thailand seized 137 live tigers, thousands of tiger skin amulets, 70 preserved cubs and other tiger parts from the ‘Tiger Temple’ in Kanchanaburi Province, and announced it will investigate other captive tiger facilities implicated in tiger trade. The Tiger Temple seizure was a bold enforcement effort towards closing down a facility that has been repeatedly implicated in tiger trafficking. It has been reported that charges have been filed in this case and that investigations continue to explore links between the Temple and facilities in Laos implicated in the tiger trade. It is important to ensure the seizure is followed-up to ensure prosecution of those implicated in illegal wildlife trade and that relevant laws are amended to improve regulations of facilities keeping tigers.
- In 2015, Thai Airways supported by the Government launched a campaign against the illegal transportation of ivory.

CHALLENGE

For more than a decade, serious concerns have been raised about the regulation of ivory and captive elephant trade in Thailand. Thailand’s domestic legal ivory market has been repeatedly exposed as a means for laundering illegal ivory. In 2015, the Elephant Ivory Act was adopted to improve regulation of the domestic ivory trade, following which about 220 tonnes of African and Asian elephant ivory collected from 44,000 individuals was registered for legal trade. Another open source of legal trade in ivory in Thailand is ivory obtained from registered domesticated elephants.

Registration of live captive elephants is not required until the elephant reaches eight years of age, which effectively avoids registration of the most vulnerable elephants exploited by the entertainment industry. This loophole enables laundering of wild-caught juveniles and infants. Thailand is seeking to reduce this loophole through legislative amendments requiring all live elephants to be registered by the age of three months instead of eight years; this amendment has yet to be proposed to the Thai Cabinet.
UGANDA | INVESTING IN ENFORCEMENT

KEY INDICATORS

- INTERPOL National Central Bureau has officer(s) dedicated to investigating wildlife crime
- Multi-agency enforcement mechanism established to investigate wildlife crime
- Financial intelligence unit includes wildlife crime on their portfolios
- Assets and proceeds of crime seized in relation to wildlife crime cases since 2014
- DNA analysis used in wildlife crime investigations since 2014
- Government monitoring of online wildlife trade
- Part of bilateral or multilateral agreements that specifically tackle transnational wildlife crime
- Participated in INTERPOL operations on wildlife crime since 2014
- Participated in regional/international enforcement operations on wildlife crime since 2014
- Applied or declared intention to apply ICCWC Wildlife and Forest Crime Analytic Toolkit

MAIN OBSERVATIONS

- Recent investments to strengthen capacity have included six sniffer dogs donated by NGOs to be deployed at key border points, including Entebbe International Airport, where they have led to several ivory seizures; a mobile scanner unit deployed by the Uganda Revenue Authority (URA) to intercept ivory; establishment of a wildlife crime database at Uganda Wildlife Authority (UWA), which is not yet operational; various training workshops for UWA, URA and police, including training in controlled deliveries and recovery of proceeds of wildlife crime conducted by UNODC. Lack of capacity in some areas continues to be a challenge.
- UWA has established an intelligence unit with 80 staff members deployed specifically to curb illegal wildlife trade and given training in areas such as advanced intelligence, use of online tools for tackling wildlife crime and crime scene management.
- An inter-agency task force comprising Uganda Police, URA, UWA, INTERPOL, Civil Aviation Authority and the Chieftaincy of Military Intelligence was established in 2013. While the task force has been involved in coordinated joint operations, it does not appear to include prosecutors or the judiciary in its membership, a major gap in ongoing efforts to increase prosecutions and secure better court outcomes in wildlife crime cases.
- UWA staff are part of a Joint Security Team at Entebbe International Airport, which has reportedly led to an increase in seizures of wildlife items.
- URA has established a specialised unit focusing on wildlife enforcement and is undertaking steps to include a course on CITES and wildlife enforcement in the Customs training curriculum.
- Uganda is participating in regional wildlife trade enforcement initiatives, in particular collaborating with Kenyan agencies through INTERPOL and the Lusaka Agreement Task Force, and has shared information relating to ivory trafficking with Malaysia, Singapore and Sri Lanka.
- An MoU was adopted in 2015 between UWA, URA, Uganda Police Force and the UNODC through which Uganda formally joined the UNODC-WCO Container Control Programme. The Programme seeks to establish structures to minimise the risk of maritime containers being exploited for trafficking of various illicit goods, such as wildlife products.

BEST PRACTICE

DNA samples from all ivory seizures of more than 500kg have been sent to the University of Washington for analysis. DNA samples from rhino horn seizures have also been taken for analysis.

ABOVE: MOBILE SCANNER IN OPERATION, UGANDA © EIA
**UGANDA | ENSURING EFFECTIVE LEGAL DETERRENTS**

**KEY INDICATORS**

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, i.e., the maximum sanction applicable is not less than 4 years.
- Sentencing guidelines for wildlife crime have been disseminated.
- Known convictions for wildlife crime since 2014.
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014.
- Has anti-corruption unit.
- Known convictions for corruption related to illegal wildlife trade cases since 2014.
- 25/100 Ti Corruption Perceptions Index 2015.

**MAIN OBSERVATIONS**

- Uganda has recently reviewed its Wildlife Act; an amendment bill for tabling in Parliament was approved by Cabinet in early 2016. In May 2016, President Museveni indicated that the bill is a priority and would be passed in 2016. The amended Act will provide for more deterrent sentences, including sentences of up to 20 years, for poaching and wildlife trafficking and will clarify the responsibilities of various agencies involved in addressing wildlife crime. A significant achievement of the Bill is that it is expected to close a major loophole in the previous legislation by including possession of ivory and rhino horn as an offence.
- Orders and regulations to enable CITES provisions to be incorporated into domestic legislation have also been developed, including the Uganda Wildlife (Powers of Search, Arrest, Possession and Use of Firearms) Regulations, 2015 and are expected to be passed following enactment of the amended Wildlife Act.
- Judicial sensitisation to wildlife crime has been identified as an urgent necessity to secure the best outcomes from prosecutions for wildlife crime.
- Uganda has no centralised database of court records and outcomes.
- The Government signed a 10-year MoU with the NGO Natural Resource Conservation Network (NRCN) to delegate authority to prosecute wildlife trade cases. This has greatly increased prosecution rates for wildlife crime.
- Uganda has recently finalised the establishment of a specialised fast-track court which will hear wildlife crime cases.

**UGANDA | ERADICATING DEMAND**

**KEY INDICATORS**

- Prohibits trade in elephant ivory.
- Prohibits trade in parts/products of Asian big cats.
- Stockpiled ivory has been inventoried.
- Destroyed ivory stockpile since 2014.
- Destroyed other wildlife stockpiles since 2014.
- No known incidents of thefts of government-owned wildlife stocks.
- Government-led initiatives to reduce demand for wildlife products implemented since 2014.

**MAIN OBSERVATIONS**

- In November 2014, a loss of 1,200kg of ivory from Government stockpiles was reported, detected during a routine inspection. A secure ivory strong room has since been built at UWA, equipped with CCTV.
- Following the ivory stockpile theft, UWA in collaboration with the NGO Stop Ivory has completed a full inventory of its ivory stockpile and has developed an electronic inventory database. The Government has since applied for funding to inventory ivory stockpiles held by police and the URA.
- As a signatory to the Elephant Protection Initiative (EPI), Uganda has committed to closing its domestic ivory markets and observing a minimum of a 10-year moratorium on all international ivory trade.
- In collaboration with NGOs, posters and leaflets aimed at raising awareness of wildlife trade have been developed and displayed at Entebbe International Airport and other locations. In collaboration with WWF, the UWA developed a series of radio advertisements aimed at raising awareness on illegal wildlife trade.
- UWA has dedicated Community Conservation Rangers who run projects in communities surrounding protected areas aimed at building support for conservation.

**CHALLENGE**

The urgent need to harmonise laws and increase judicial awareness of wildlife crime was highlighted by an ivory trafficking case. Following a seizure of elephant ivory in Uganda, the owner of the illegal cargo and target of an arrest warrant exploited legal loopholes to absurd effect, claiming he was shipping ivory from the Democratic Republic of Congo (DRC) and only transiting Uganda, and was therefore not in breach of Customs law.

He was able to successfully petition the High Court to order the release of the ivory for onward export, in contravention of CITES. The return of the ivory has been suspended pending an appeal of the High Court’s judgment and parallel legal proceedings in the trial court.

In June 2015, the High Court in Uganda dismissed a suit filed by the NGO Greenwatch Uganda, which had challenged the export permit issued by the UWA allowing the export of 7.3 tonnes of pangolin scales. Uganda has also reported to the CITES Secretariat on a pilot project to commercially breed pangolins for trade. This raises concerns about the impact of such a project because pangolins do not breed well in captivity and captive breeding facilities for pangolins may be used as a front for laundering wild specimens.

Further, Uganda has also been implicated in pangolin trafficking; for example, in January 2015, it was reported that two tonnes of pangolin scales were seized in Entebbe International Airport.
United Kingdom

**Member of** INTERPOL | World Customs Organisation | European Commission Enforcement Working Group

---

### Main Observations

- **The United Kingdom** is a leader in intelligence-led policing and the National Intelligence Model for policing is applied to combat wildlife crime in the UK. The NWCU prepares strategic and tactical assessments, while the UK Tasking and Coordinating Group – a high level group of senior Government and law enforcement agency officials – sets the strategic priorities. A number of agencies cooperate on implementation of these priorities.

- The UK's National Crime Agency's National Strategic Assessment includes wildlife crime.

- **London's Metropolitan Police** has a dedicated Wildlife Crime Unit (WCU), with two officers trained in forensics and other techniques. The WCU shares information with other agencies including UK Border Force, INTERPOL and the NWCU.

- The Inter-Ministerial Group on International Animal Welfare nominally oversees policy relating to the wildlife trade. As of January 2016 the Group had not reconvened and membership had not been finalised.

- The **EU-TWX database tool** enables real-time exchange of information on wildlife crime among 34 European countries, including EU member states. The UK contributes data to EU-TWX and participates in Europol and Eurojust.

- The UK has a **DNA database of all rhino horn** in the country and was used in a 2010 conviction that traced seized horn to an animal which died of natural causes in Colchester Zoo.

- Metropolitan Police and researchers at London’s King’s College and UCL have developed a technique to recover fingerprints from ivory.

### Key Indicators

- **INTERPOL National Central Bureau** has officer(s) dedicated to investigating wildlife crime.

- **Multi-agency enforcement mechanism** established to investigate wildlife crime.

- **Financial intelligence unit** includes wildlife crime on their portfolios.

- **Assets and proceeds of crime seized in relation to wildlife crime cases since 2014**

- **2016**

### Case Files

In 2015, a joint operation by Cumbria Police and NWCU recovered ivory offered on eBay which when radio carbon-dated was found to not be a legal antique. The suspect was convicted, sentence to imprisonment and ordered to pay costs for ivory testing.
Following the June 2016 referendum to leave the UNITED KINGDOM EU, there is UK wildlife legislation, much of which derives around business hubs.

ensure existing legislation is maintained and launched a ground-breaking targeted demand-reduction initiative called the ‘Chi Campaign’ in 2014, targeting the main consumer group for rhino horn.

Known convictions for corruption related to illegal wildlife trade cases since 2014

Sentencing guidelines for wildlife crime have been disseminated

KEY INDICATORS

Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014

Has anti-corruption unit

Known convictions for wildlife crime since 2014

Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years

Sentencing for wildlife crimes is often relatively lenient in the UK and does not reflect the severity of the crime. For example, in March 2015 a jeweller was ordered to carry out 120 hours of community service after being convicted of selling jewellery containing tiger parts; a Norwich company was fined £2,000 in August 2016 after four tiger paws and a tail were found in a parcel bound for Shanghai. Custodial sentences are sometimes handed out, such as two 12-month sentences in December 2015 for smuggling San Salvador rock iguanas. A review of wildlife trafficking prosecutions between 1996 and 2015 indicates an increase in the percentage of cases that result in imprisonment or community penalty. A review of the Control of Trade in Endangered Species Regulations, which would provide sentencing guidelines for wildlife crimes, has been delayed. Sensitisation of prosecutors and the judiciary is urgently required to ensure consistently deterrent sentences.

As museums; as ‘part of a family relocation or as part of a bequest’; or ‘part of a bona fide research project’. These controls have now been adopted across the EU.

The United for Wildlife Transport Task Force was formed in August 2014, bringing together representatives of NGOs, government and transport companies. The UKFCO is a member of the Task Force. In March 2016, the Buckingham Palace Declaration was signed by 40 organisations, including airlines, shipping companies, and port operators. The Declaration lists 11 commitments to facilitate better information sharing and thus enable stronger enforcement against the wildlife trade in the transport sector.

The sale of all unworked ivory, rhino and tiger products, and any worked items that derive from or have been modified since 1947, is prohibited in the UK. Trade in pre-1947 worked ivory is allowed. TRAFFIC reported (Aug 2016) that in 2004 buyers of antique ivory at London’s markets were dominated by American and European tourists, in 2016 buyers of ivory are largely travellers/citizens from mainland China, Japan and Hong Kong. This is a serious concern. China is the world’s largest destination for ivory and the Government of China has committed to closing its own domestic ivory market; it appears the UK ivory market could be stimulating further demand among Chinese consumers. Recent investigations conducted by the BBC found the legal trade in ivory in the UK provides avenues for laundering illegal ivory. Despite repeated commitments to close its domestic ivory markets, the UK has yet to do so.
The USA has demonstrated significant commitment to combating wildlife crime. Following the issuance of an Executive Order by President Obama in 2013, the National Strategy for Combating Wildlife Trafficking was adopted in February 2014, establishing an interagency wildlife task force and an advisory council of non-government experts and industry leaders for providing guidance on US anti-wildlife trafficking efforts.

MAIN OBSERVATIONS

- The USA has demonstrated significant commitment to combatting wildlife crime. Following the issuance of an Executive Order by President Obama in 2013, the National Strategy for Combating Wildlife Trafficking was adopted in February 2014, establishing an interagency wildlife task force and an advisory council of non-government experts and industry leaders for providing guidance on US anti-wildlife trafficking efforts.

- The Fiscal Year 2014 Omnibus Spending Bill passed by Congress increased the budget allocation by US$45 million for funds provided by the US State Department and US Agency for International Development (USAID) to combat the transnational threat of wildlife poaching and wildlife trafficking supporting USAID, the Global Environmental Facility and the Department of the Interior initiatives.

- The US has provided significant levels of funding and training globally for law enforcement agencies for improving capacity in several areas such as forensic investigation and cross-border law enforcement cooperation. In 2015, the US Fish and Wildlife Service (FWS) invested US$20 million in 141 anti-wildlife trafficking projects. Under the framework of the National Strategy for Combating Wildlife Trafficking, the US has helped train more than 2,000 enforcement officials in more than 40 countries.

- The US has also raised the issue of wildlife trafficking in significant bilateral and multilateral events. For example, wildlife trafficking has been a regular agenda item in the US-China Strategic and Economic Dialogue in 2014, 2015 and 2016.

CHALLENGE

In 2014, it was reported that there are fewer than 330 FWS inspectors and agents in the largest ports in the US – about the same number as 30 years ago when the agency’s law enforcement branch was established.

Another challenge identified by the United States Government Accountability Office, in a report published in September 2016, is the lack of identified performance targets for the agencies represented in the Presidential Task Force on Wildlife Trafficking, including the Department of Interior, Department of Justice and State Department, and responsible for implementing the National Strategy on Combating Wildlife Trafficking.

CASE FILES

Launched in 2012, Operation Crash has involved more than 140 FWS law enforcement officers working closely with other agencies to investigate a major rhino horn trafficking case. Charges were brought against over 30 individuals under a variety of laws, including the Lacey Act, for a number of offences such as conspiracy, money laundering and tax evasion. By June 2016, sentences imposed included fines exceeding US$2m, over US$5m collected from asset forfeiture and restitution and over 30 years of prison terms. This case is still ongoing.

KEY INDICATORS

- PRISON SENTENCES TOTALLING 33.75 YEARS
- FINES TOTALLING US$ 2 080 500
- 27 CONCLUDED CASES RESULTING IN SENTENCING
- FORFEITURE & RESTITUTION US$ 5.4m
- US$ 2 080 500
- 33.75 YEARS
- TOTALLING

**MAIN OBSERVATIONS**

- In 2015, the **Wildlife Trafficking Enforcement Act**, which aims to make wildlife trafficking a predicate offence under racketeering and money laundering statutes, was introduced in the US Senate.
- Recent regulatory changes have **prohibited almost all trade in ivory**, increased restrictions on the trade in live tigers within the US, improved protection to lions under the Endangered Species Act and imposed a ban on the import of sport-hunted trophies from elephants in Tanzania and Zimbabwe and import of lion trophies taken from captive lion populations in South Africa.
- **The US** has provided critical support to several governments such as Mozambique, Vietnam, Myanmar and Laos for **improving their legislative framework and prosecutorial capacity for combatting wildlife crime**.

**CASE FILES**

Chinese national Zhifei Li was arrested in 2013 and charged with trafficking rhino horn and elephant ivory. He received one of the longest sentences imposed in the US for wildlife trafficking – imprisonment for five years and 10 months and forfeiture of proceeds of crime (US$2.5m).

In 2014, the US indicted Dawie Groenewald, who ran a game-farming and hunting trophy business in South Africa. The charges brought against him and his brother included ‘conspiracy to sell illegal rhinoceros hunts in South Africa in order to defraud American hunters, money laundering and secretly trafficking in rhino horns’. US authorities have requested the extradition of Groenewald and his brother; the case is still ongoing.

In February 2016, a US company was sentenced for timber trafficking and was ordered to pay more than US$13m in fines, community service and forfeited assets. The illegal timber was obtained from far eastern Russia, which is also critical tiger habitat. The Department of Justice has announced that US$1,230,825 in community service payments will be provided to the National Fish and Wildlife Foundation (NFWF) and the FWS Rhinoceros and Tiger Conservation Fund for use in conservation projects.

USA | ERADICATING DEMAND

**KEY INDICATORS**

| Prohibits trade in elephant ivory |
| Prohibits trade in parts/products of Asian big cats |
| Stockpiled ivory has been inventoried |
| Destroyed ivory stockpile since 2014 |
| Destroyed other wildlife stockpiles since 2014 |
| No known incidents of thefts of government-owned wildlife stocks |
| Government-led initiatives to reduce demand for wildlife products implemented since 2014 |

**MAIN OBSERVATIONS**

- In 2015, the US and Vietnam launched a **five-year programme** on Combatting Illegal Wildlife Trade to tackle trafficking and reduce demand. In March 2015, in partnership with the governments of Vietnam and South Africa, and civil society groups, the US launched Operation Game Change, a demand-reduction campaign that included a series of public outreach events focused on reducing consumption of rhino horn.
- **In July 2016**, a **near-total ban on the domestic commercial trade in ivory** came into effect in the US. In addition, a number of states have also adopted ivory bans, including three with the largest ivory markets in the US – New York, California and Hawaii.
- **In 2015**, more than one tonne of ivory was **destroyed** and, in 2016, FWS destroyed its stockpile of confiscated rhino horn.
- **US funding** has been provided for numerous **awareness-raising efforts** and demand-reduction campaigns globally. For example, USAID’s ARREST programme (Asia’s Regional Response to Endangered Species Trafficking) has funded awareness-raising campaigns such as ‘Fin-Free Thailand’ and ‘THINK’ behaviour change campaigns in China and Vietnam.

**CHALLENGE**

Although interstate and international trade in parts and derivatives of captive-bred tigers is prohibited, it is still legal to own captive big cats, including tigers, in the US. There are estimated to be roughly 5,000 captive tigers in private ownership in the US, including in tiger petting operations.

However, efforts are underway to address this problem – the Big Cat Public Safety Act has been proposed to end private ownership and captive breeding of big cats, including tigers. US Congress is yet to enact the law, although in 2016 the FWS adopted new regulations to close a loophole which previously exempted captive-bred tigers of mixed or unknown genetic origin from permitting requirements. The new regulations now require anyone selling tigers across state lines to obtain a permit or register the tiger.
Expressing commitment at the highest level in Government, with the Prime Minister of Vietnam issuing two directives issued in 2014 and 2016 mandating all enforcement agencies to improve efforts to combat illegal wildlife trade.

Improving national and international co-operation by appointing a wildlife crime focal point in the police. Vietnam’s multi-agency enforcement unit, ‘the National Steering Committee for Wildlife Enforcement’, includes prosecutors and the Supreme People’s Procuracy.

Committing to improve regional and international co-operation by entering into agreements with China, South Africa, and Laos on combating illegal wildlife trade. However, these commitments have not fully been translated into actions—for example, under the MoU with South Africa, DNA kits were provided by South Africa to Vietnam for extracting rhino horn samples for use in ongoing investigations, but it has been reported that some rhino horn samples which were being hand-delivered to South Africa by a Vietnam delegation have on occasion gone missing in transit.

Training has been provided in a number of areas such as prosecution and use of specialist investigation techniques.

In 2016, a new wildlife crime manual prepared by NGO Freeland was circulated by the people’s police academy.

Lack of mandate of the Economic Police and Financial Investigation Unit to tackle money laundering associated with illegal wildlife trade is a significant obstacle. Vietnam is a member of the Asia/Pacific Group on Money Laundering but it does not appear that financial investigation of wildlife crime is taking place in Vietnam.

Lack of use of specialised detection and investigation techniques such as canine units, call data records analysis and forensic investigations is another significant obstacle. Further, there appear to be lack of clarity about the mandate to use controlled deliveries.

There have been a number of prosecutions for online wildlife trade, although the majority of illegal wildlife trade occurring online is not investigated and where there are investigations they often result in suspects receiving small fines.

Applying the ICCWC Wildlife and Forest Crime Analytic Toolkit is a positive step and it is now important to ensure that information on progress made in implementing the recommendations arising from the Toolkit process is made publicly available.

Despite an increase in training and capacity-building and the directives issued by the Prime Minister, Vietnam continues to play a significant role in illegal wildlife trade. For example, recent investigations conducted by the Wildlife Justice Commission found Vietnamese nationals are part of organised criminal networks involved in large-scale wildlife trafficking. Further, Vietnamese nationals were the most commonly arrested Asian nationals in Mozambique and South Africa related to rhino horn trafficking between 2010–15.

In Nov 2014, police in Khanh Hoa seized nearly 10 tonnes of marine turtles. Case yet to be prosecuted (Feb 16).

In 2009, Vietnam conducted one of the world’s largest ever ivory seizures, recovering 6,232kg of ivory from Tanzania; related seizures were made in the Philippines. No notable evidence of prosecution outcomes (Nov 16).
VIETNAM | ENSURING EFFECTIVE LEGAL DETERRENTS

KEY INDICATORS1

- Legislation treats wildlife crime as a ‘serious crime’ as per UNTOC, ie, the maximum sanction applicable is not less than 4 years
- Sentencing guidelines for wildlife crime have been disseminated
- Known convictions for wildlife crime since 2014
- Charges brought under ancillary legislation such as anti-money laundering laws in wildlife crime cases since 2014
- Has anti-corruption unit
- Known convictions for corruption related to illegal wildlife trade cases since 2014
- Destroyed ivory stockpile since 2014

MAIN OBSERVATIONS

- Amendments to the Penal Code were due to come into force in July 2016; this is now due to take place in 2017. The Penal Code reform is expected to be a significant positive legislative improvement because it aims to remove existing legal loopholes. For example, a major achievement of the Penal Code reform is that it has criminalised ‘possession’ of illegal wildlife products. The new Code also provides greater protection for non-native species.

Under the old Penal Code, penalties for wildlife crime were determined solely by monetary value of the wildlife specimens, which is often challenging to determine. To address this concern, the Penal Code reforms have introduced the weight or quantity of seized wildlife as a factor to consider in sentencing. Penalties for wildlife crime have also been increased and for some offences include up to 15 years imprisonment.

The Government has created lists of sentences applicable for each species against given amounts and/or weight of the species seized to aid the prosecutors and judiciary. The Supreme People Procuracy can now prosecute a company or organisation for wildlife crime where previously it was only possible to prosecute an individual.

CHALLENGE

A recent study conducted by Education for Nature – Vietnam concluded that all 26 of the wildlife farms investigated in 2014-15 exhibited signs of laundering wild animals, 16 of which openly admitted to laundering wild animals while 18 admitted purchasing wild animals without appropriate papers.

This is particularly a concern in relation to tiger farming; there are 241 captive tigers in Vietnam in both farms and zoos and at least six of these facilities with captive tigers are implicated in tiger trade. Earlier this year, the People’s Committee of Nghệ An province granted a permit allowing Bach Ngoc Lam Co Ltd to keep 15 tigers for ‘conservation purposes’. The husband of the owner of this facility is a criminal with two previous convictions related to the killing and illegal trading of tigers, along with other species of endangered wild animals.

VIETNAM | ERADICATING DEMAND

KEY INDICATORS1

- Prohibits trade in elephant ivory
- Prohibits trade in parts/products of Asian big cats
- Stockpiled ivory has been inventoried
- Destroyed ivory stockpile since 2014
- Destroyed other wildlife stockpiles since 2014
- No known incidents of thefts of government-owned wildlife stocks
- Government-led initiatives to reduce demand for wildlife products implemented since 2014

MAIN OBSERVATIONS

- In 2014, Vietnam’s CITES Management Authority reported that all seized tiger parts had been destroyed. Destruction of Vietnam’s ivory and rhino horn stockpiles is scheduled to take place in November 2016.
- Implementing a MoU between the Ministry of Health and other key stakeholders under which workshops have been conducted on the illegality of using rhino horn and leading traditional medicine practitioners in

Vietnam have signed a pledge committing to refrain from any engagement in illegal wildlife trade or in consumption of threatened wildlife species, including as ingredients in traditional medicine.

- Curbing consumption of pangolin scales by removing pangolin scales from the list of medicines covered by health insurance in May 2015.
- In 2016, Vietnam Posts and Telecommunications Group became the first state-owned company to encourage zero tolerance of wildlife consumption among its 90,000 work force.
- In June 2016, over 80 representatives of the Government’s Central Committee for Propaganda and Education issued a nationwide communication response establishing wildlife crime and a zero tolerance of illegal wildlife consumption as two of the major priorities for the Vietnamese media.
- A key challenge is the lack of robust methods to measure the impact of demand-reduction campaigns. Careful identification and profiling of key consumer groups and their potentially disparate motivations is key to the success of demand reduction campaigns.

CHALLENGE

Farming of certain wildlife species such as tigers remains a serious concern in Vietnam, undermining enforcement efforts. A recent investigation of 26 large multi-species wildlife farms in Vietnam conducted by Education for Nature – Vietnam concluded that all 26 of the wildlife farms investigated in 2014-15 exhibited signs of laundering wild animals, 16 of which openly admitted to laundering wild animals while 18 admitted purchasing wild animals without appropriate papers.
